

A discreet underfloor hoist designed to maximise interior space while delivering safe, reliable wheelchair access.

This underfloor hoist is designed for dual purpose vehicles where passenger seating and wheelchair accessibility need to work together. By mounting beneath the vehicle floor, it allows space for removable seating that can be used by passengers when the wheelchair space is not required.

It offers a flexible, high-function solution. The system is fully certified to New Zealand safety standards, includes built-in safety features like lighting and audible alerts, and is backed by a 3-year warranty with local service and parts—helping minimise downtime and maintain reliable vehicle availability.

Dimensions

Platform 825 x 1410mm
