Track restraint

The wheelchair restraints we install ensure wheelchair users are completely secure during journeys.

We provide track-fitted restraints and disk restraints, depending on the vehicle and configuration involved. Both solutions include full over-shoulder seatbelt integration and easy slot-in, slot-out to simplify loading and unloading.

Fully certified to NZ Safety Standards, our wheelchair restraint systems range from 85kg to 200kg capacity to cater for a wide range of applications. These 4 point systems include a standard occupant lap belt and have the ability to integrate a 3 point retracting over-shoulder belt for greater safety assurance.

Note: (3 point belts only available in suitable applications, i.e.: proximity to vehicle side wall and anchorages)

Each 4 point restraint system is designed for a single wheelchair occupant. Quick lock install and release. Please specify your desired weight rating when ordering.

FEATURES

Fast to increase you service
