

Transport your glass and materials in a safe, efficient and secure way.

Internal glass transport provides the ultimate range of glass transport systems for the interior of your vehicle. These systems have been designed to transport your glass to its destination safely and quickly. The modular system allows for various sizes to suit your application. It has improved health and safety with full rubber facing, anti-slip sliding rubber chocks and rubber faced retention poles. The lightweight aluminium construction is durable and solid increasing fuel efficiency over time. The spring loaded retention pole enables increased efficiency when unloading and loading.

FEATURES

- Excellent modular fit
- Improved health and safety with full rubber
- Increased loading/unloading efficiency with spring-loaded retention pole
- Increased fuel efficiency over time

SPECIFICATIONS

- Modular
- Variable sizes
- Rubber faced retention poles
- Anti-slip sliding rubber chocks
- Lightweight aluminium construction
- Durable and solid
