External glass transport

Transport your glass and materials in a safe, efficient and secure way.

External glass transport provides the ultimate range of glass transport systems for the side of your vehicle. These systems have been designed to transport your glass to its destination safely and quickly. The modular system allows for various sizes to suit your application. It has improved health and safety standards with full rubber facing, anti-slip sliding rubber chocks and rubber faced retention poles. It has 900mm front load protection to protect the glass during transport. The lightweight aluminium construction is durable and solid while increasing fuel efficiency over time. A spring loaded retention pole enables increased efficiency when unloading and loading.

FEATURES

Correct size for you

Improved health and safety with full rubber

Increased loading/unloading efficiency with spring-loaded retention pole

Increased fuel efficiency over time

SPECIFICATIONS

Modular transport system

Variable lengths: 1500mm, 1800mm, 3000mm, 3200mm

Height: 2200mm

Rubber faced retention poles

Anti-slip sliding rubber chocks

Lightweight aluminium construction

900mm front load protection
