# Syncro Light shelving units

## Lightweight shelving that keeps equipment sorted and in place.

Syncro Light shelving units are made from a high-strength aluminium-magnesium alloy. They take weight out of your van or ute fitout and still give your team organised storage they can rely on. Each unit fits with other Syncro modules, so we can build the layout around what you carry.

Syncro Light has the same dimensions as the steel Syncro range, so aluminium and steel shelving can go in the same fitout. We match each shelf to what it needs to hold and use steel where the load calls for it.
